

Securing your systems with smart solutions

A data-driven, human-guided security approach detects and responds to attacks more quickly and accurately. With the Microsoft global network of real-time threat intelligence services, it continues to evolve, anticipate, and stay ahead of risks.

Microsoft real-time security stats

40M+

lines of data
reviewed per day

Incorporates
analyst feedback
daily in order to
adapt to threats in
real time

100-200

suspicious events
flagged for human
analysis per day

85%

of cyberattacks
detected after
three months of
learning feedback

5X

fewer false
positives than
machine-only
systems
